

ATLANTICO EXCURSIONES API

Integrate our sales system with the Atlantico Excursiones API. The test environment is accessible in <https://testapi.atlanticoexcursiones.com>. The production environment is accessible in <https://api.atlanticoexcursiones.com>.

Complete back office integration allows for full control of product search queries, modifications and cancellations, making the booking process easier for clients with multi provider systems.

1. Security

In order to be able to connect with the API you will have to provide the IP/IPS from which you are planning to access the live server (a maximum of 2 ips can be provided). Atlantic Dolphin Travel will grant you the access to the server. Configure your interface client using the live server address.

2. Operations

The requests must be in UTF-8 (Unicode) encoding. The responses will be in UTF-8 too.

2.1 Clasification List

clasificationList/{language}/{Collaborator}

Get the list of available classifications for ticket services.

Request Business rules

Element / Attribute	Rule
Language	Mandatory
Collaborator	Optional

Request Observations

Language : **CAS** – Español (Castellano), **ENG** – English, **FRA** – Françes, **RUS** – Russian, **ALE** – Aleman, **ITA** – Italiano
Collaborator: Collaborator number

Response Business rules

The Classification endpoint returns information about the Atlantico Excursions tour classifications. The response includes the classification identifier, name, description, image and classification code.

Example Value:

```
{
  "id": "1312481776",
  "code": "20",
  "name": "Coach Tours",
  "desc": "We organize tours in air-conditioned buses and accompanied by professional guides. Tours on the islands of Tenerife and La Gomera.",
  "image": "1312481776.jpg"
}
```
